

6516206180.txt

As an XM radio user, I find the ability to obtain local traffic and weather information when entering a new location an asset in safe travel. Finding a local station that offers the same information when you need it is like playing the lottery you may or may not find one. It has been proven that playing with the radio is dangerous when you are driving, especially in heavy traffic. Having a quick access to information could possibly save a life or two. Please reject NAB's petition 04-160.

THANK YOU

RHB
